

Press release**Eiffage, in a consortium, wins the contract to install high voltage systems and power and data cabling on the RER E line western extension (EOLE) for a total sum of €32 million**

SNCF Réseau has awarded Eiffage, through its subsidiary Eiffage Énergie Systèmes in a 50/50 consortium with SDEL Infi (principal), the contract to install power and data cabling for the Porte Maillot and La Défense stations, the tunnel and nine ventilation shafts of the RER E line western extension (EOLE), for a total sum of €32 million.

The contract involves the installation of high and low-voltage equipment powered by eight 20 KV delivery substations and six transformer substations. In terms of data cabling the project involves implementing the fibre-optic network, voice-data-image network, video surveillance, telephony, intercom, access control and intrusion detection, along with the centralised technical management system. The contract also includes implementation of the architectural and functional lighting in the two new stations, plus safety lighting in the tunnel and its nine ventilation shafts.

The RER E line western extension project (EOLE) at the heart of the Grand Paris Express was officially declared to be in the public interest on 31 January 2013. The RER E line western extension project (EOLE) aims to construct 55 kilometres of track, including 8 kilometres through a tunnel, to convert 47 kilometres of existing track and to create three new stations: Porte Maillot, La Défense-CNIT and Nanterre-la-Folie. Upon completion, 620,000 passengers will use this new RER line every day.

Eiffage Énergie Systèmes had already won in October 2018, within the joint venture Alise, the contract to comprehensively implement the electrical architecture of Grand Paris Express Line 15 South.

About Eiffage

Eiffage is one of Europe's leading construction and concessions companies. The Group's activities are organised on the basis of the following business lines: construction, real estate and urban development, civil engineering, metal, roads, energy and concessions. Thanks to the experience of more than 65,000 employees, Eiffage generated revenues of €15 billion in 2017, of which nearly 21% outside France.

About Eiffage Énergie Systèmes

Eiffage Énergie Systèmes designs, builds and operates grid, energy systems, while respecting people and protecting the environment. Eiffage Énergie Systèmes offers comprehensive, multi-technical services in all aspects of the electrical, industrial and climate engineering. Backed by the experience of 25,000 employees, Eiffage Énergie Systèmes generated €3.8 billion in revenues in 2017.
